

PrintsPaul

Innovative solutions for printing & converting

A photograph of two men in a printing plant. The man on the left is wearing a dark t-shirt and jeans, smiling as he looks at a roll of paper. The man on the right is wearing a plaid shirt, a cap, and safety glasses, also smiling and pointing at the paper. They are standing in front of a large roll of paper being processed by machinery. The background shows a busy industrial setting with various pieces of equipment and bright lighting.

PrintsPaul

Under the visionary leadership of Managing Director Paul Arndt, PrintsPaul GmbH & Co. KG is one of the leading full-service providers for printing, converting and inspection solutions. Since 2021, the company in Eschweiler near Aachen has also been presenting machines developed in-house - initially in the converting sector, followed by the digital Starline series and finally the latest highlight: the hybrid printing systems.

The machines from PrintsPaul are characterized by their high level of customizability in order to offer customers maximum flexibility. A comprehensive range of services complements the company's impressive performance spectrum.

Rent ... Test ... Buy!

Test
without
any risk!

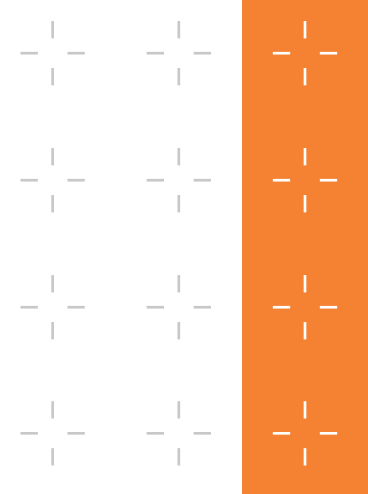

Secure your investment now without the slightest risk! With us, you have the opportunity to rent machines at fair prices before you buy them and test them extensively in your own production environment. The minimum rental period is 30 days - limited to a maximum of 6 months.

If you are not convinced after the test phase, you can easily return the system. Does the machine meet your requirements? Then nothing stands in the way of a purchase and 50% of the rental costs will be deducted from the purchase price. Of course, you then have the option of equipping the machine with any additional options you require. This offer also applies if you decide to purchase another machine configured specifically for your application.

Prints Paul Services

Our services - your benefits

Customized solutions

From professional printing and converting systems equipped with precise automation for control and advanced web tensioning systems - our range meets your specific requirements. Rely on innovation and quality for your printing and converting applications!

Individual project planning

When it comes to project planning for machine procurement, our strength is the exact implementation of your wishes. We attach great importance to precisely understanding our customers' needs and developing customized solutions that are implemented efficiently and precisely.

Consulting & Training

Through our consulting services, we work with you to develop the optimal application strategy. Our experts support you during print production, while individual training sessions help you to design more efficient workflows and achieve the best results.

Reliable: Installation & maintenance

We offer a comprehensive range of services to ensure smooth production processes, including installation by experienced technicians, regular inspections, maintenance, remote maintenance and repairs.

Support - by phone & remote

Our telephone support is available to assist you personally with every request, while our remote support provides direct help by accessing your machine or computer to diagnose and resolve problems.

Fast procurement

One of our priorities is the fast delivery of high-quality accessories and spare parts. As your reliable partner, we rely on a professional logistics system to ensure prompt deliveries and thus minimize your downtimes.

high-performance and fully optimized
printing operations.***

Printing, converting, inspection

Analog or digital: In addition to compact and flexibly expandable printing and converting machines, we offer you customized solutions that can be precisely tailored to your wishes and requirements on a modular basis.

Our digital stars

With the ECOstarline (220 V system) and the DELUXEstarline (380 V system), our digital printing system series offers the right solution for every application. Two different frames form the basis for the use of different printing technologies (inkjet/toner). The DELUXEstarline also impresses with two laminating stations and a semi-/full-rotary flexographic printing unit, equipped with hot air and LED drying, which enables further forms of finishing. Corona pre-treatment of the web is also available as an option for the DELUXEstarline.

Powerful, hybrid systems - digital and analog

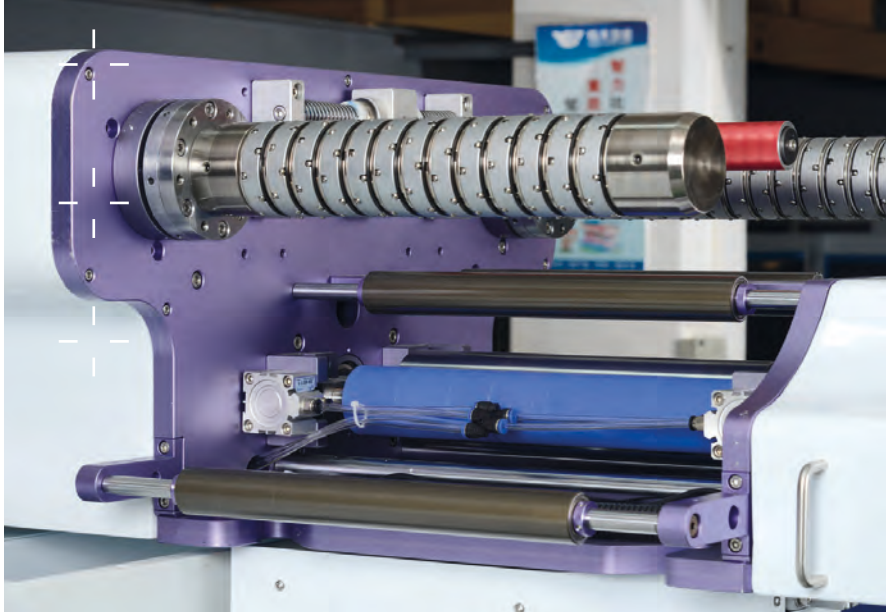

Inkjet and flexo unit or offset and flexo unit as a revolutionary combination: our innovative hybrid systems use the respective strengths of different printing technologies in a single pass to optimize the printing process and expand the range of applications, minimize costs and increase quality. Of course we combine exactly the technologies you need for your applications.

PPMDF - exactly as required

The PPMDF is a fully modular converting system that can be individually equipped with many different options according to customer requirements - including the combination of fully and semi-rotary flexographic printing units with a fully and semi-rotary die cutting unit. Additional options such as inkjet units for finishing or personalized printing are also possible. Additional applications can be achieved by integrating a screen printing module, as well as a module for embossing and finishing with hot foils.

Compact converting - flexibly expandable

Our compact converting systems offer flexible solutions for single-use and multi-use applications. The single-use configuration offers efficiency for specific projects, while the multi-use systems provide a sustainable and economical solution for combined applications. Numerous extensions can be integrated as required, especially in the modular systems, to optimize the functionality and versatility of the machines.

CONVERTING

**Compact
converting systems** *(expandable)*

Single-use

Multi-use

Extensions

Inspection: To ensure quality

Our inspection systems ensure the quality of your printing and converting processes. A wide range of machines enables comprehensive control and analysis - both inline during the production process and offline for the final inspection of production. Use our precise, high-performance tools to keep the workflow stable and ensure the quality of the printed products at the highest level.

Feature overview:

-  **toner printing**
-  **inkjet printing**
-  **flexo printing**
-  **offset printing**
-  **screen printing**
-  **hot stamping**
-  **cold foil**
-  **lamination**
-  **die cutting**
-  **slitting**
-  **inspection**
